

REPORTING METRICS IN SYNTHESYS

Defining reporting metrics in the Metrics section

The screenshot shows the 'Block Wizard' dialog box with the 'Metric Variables' section selected. The title is 'Metric Variables' with the subtitle 'Set Metric Variables values'. A table lists several metrics, with 'DMC' highlighted. The 'DMC' row shows a value of 'True'. At the bottom, there are navigation buttons: '< Back', 'Next >', 'Finish', and 'Cancel'.

Metric Variables

Misc	
Call Outcome	<% Synthesys.Property.BRMetrics/WF.Status.Co
DMC	True
Secondary Success	(no change)
Secondary Value	0.0
Success	(no change)
Success Value	(no change)

Defining reporting metrics in the Conclusion wizard

The screenshot shows the 'Conclusion Wizard' dialog box with the 'Conclusion Metrics' section selected. The title is 'Conclusion Metrics' with the subtitle 'Assign metrics variables at the conclusion.'. A table lists several metrics, all with '(no change)' values. At the bottom, there are navigation buttons: '< Back', 'Next >', 'Finish', and 'Cancel'.

REPORTING METRICS IN SYNTHESYS

Reporting metrics in Synthesys allow users to group scripted app outcomes such as *Decision Maker Contact* (DMC), *Sales* and *Enquiries*, to simplify running reports and to assist with dialler performance.

Reporting metrics are defined in the Synthesys Interaction Studio, using either the **Metrics section** or the **Conclusion wizard**. Both display the same grid with pre-defined metric names. Users can assign a value to one or more of these metric names, as required.

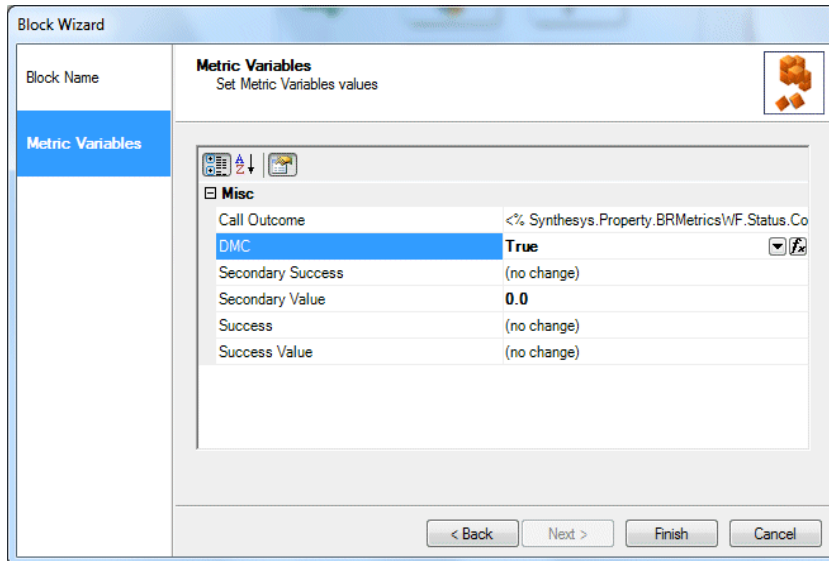

The specified metrics are written to the **Phoenix_Metrics** table at runtime, when agents pass through the Metrics section, or on finishing a call.

Using the Phoenix_Metrics table, together with the Phoenix_Metrics_Definition and Phoenix_Statistics table, users can run call-centre wide reports on defined outcomes across campaigns (e.g., number of calls, number of DMC contacts, number of sales and value of sales), without having to look at specific tables.

Assigning Values in the Metrics Section

To add a metrics section to your scripted app in the Synthesys Interaction Studio:

- Select the  Metrics Section icon from the Scripted app Blocks column of the Toolbox.
- Enter a name for the metrics section in the **Block Name** page of the wizard.
- In the **Metric Variables** page, you can set one or more of the metric values, as required, selecting the relevant option from the drop down menu, or using a calculation (ensuring data type match).

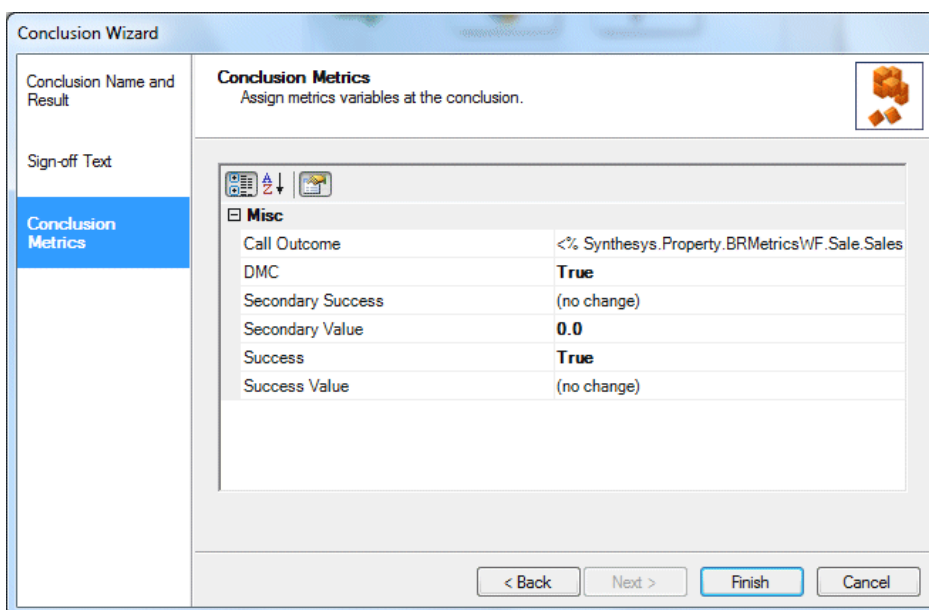

The available reporting metrics are as follows:

Option	Data Type	Description
Call Outcome	String	The Call Outcome Metric can be used to standardize the outcome of a scripted app across multiple campaigns. I.e. in all campaigns mark the outcome to Sale, if a sale has been made, as you can then total up the Sales for a particular Agent in the database, irrespective of the campaign the call was made in.
DMC	Boolean	True/ False. To specify if agents spoke to DMC (Decision Maker Contact).
Secondary Success	Boolean	True/ False. Call was successful by some secondary measure (for example upsell made).
Secondary Value	Numeric	Numeric. Value of sale, for example.
Success	Boolean	True/ False. Call was successful (for example sale made, brochure requested, appointment made).
Success Value	Numeric	Numeric. Value of upsell for example.

Assigning Values in the Conclusion Wizard

Metrics can also be defined in the conclusion flags, setting metric values in the **Conclusion Metrics** page of the conclusion wizard.

- Select the  **Conclusion** icon from the Scripted app Blocks column of the Toolbox.
- Enter a name for the conclusion in the **Conclusion Name and Result** page of the wizard.
- In the **Conclusion Metrics** page, set one or more of the metric values, as required, selecting the relevant option from the drop down menu, or using a calculation (ensuring data type match).

DMC	True
Secondary Success	(no change)
Secondary Value	0.0
Success	True
Success Value	(no change)

< Back Next > **Finish** Cancel

Once the call has been concluded at run time in the Synthesys Portal, the results are written to the **Phoenix_Metrics** table containing the sequence ID, the Metric ID, and the value assigned.

This enables users to report on DMC, Sales, Sales value etc. in a standard manner across campaigns, from a central location that stores the metrics assigned.
